

# DocumentSign™ - Modified after Certification

## An illustration of the messaging for a legitimately certified document modified post certification

This example document was signed with a CDS compatible certificate however it has been purposely modified after certification. The modification is of only a single byte of Data.

To experience the same messaging as the screen shot below, please open with version 8.1.X of the reader.

### Certified Document Services.

Certified Document Services (CDS) is one of the services enabled by the Adobe root certificate authority. CDS enables document authors to sign Portable Document Format (PDF) files, using standard digital certificates, which automatically validate when authors are using free Adobe® Reader® software. No additional client software or configuration is required.

CDS was designed to enable organizations and individuals who publish high-value documents to large and disparate recipient groups to increase the assurance level that the document's integrity and authenticity are preserved. By adding a CDS signature to a PDF file, document authors can increase this assurance level without requiring recipients to deploy additional software.

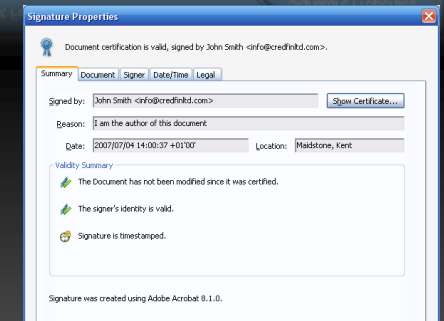

### How does CDS work?

Following a thorough verification of both the individual and / or the organization requesting a DocumentSign digital ID, GlobalSign will issue the digital ID in the form of a Digital Certificate, securely stored and protected on a SafeNet® hardware cryptographic device. Authors can digitally certify PDFs (desktop and server-based solutions available) using certificates "chained" up to the trusted Adobe Root. Approval signatures may also be applied at a later stage. Recipients simply need to open the document using the Adobe free reader to instantly verify the authenticity and integrity of the document. Adobe's simple to interpret "Blue Ribbon, Question Mark, and Red X" trust messaging allows even novice users an easy to understand method to determine if the document is from a legitimate source.

By clicking on the signature properties, recipients can view additional information, such as signing certificate details including information about the certificate policy, signer's contact information, on-line certificate status protocol (OCSP), and time-stamping details that become the foundation for strong authentication, data-integrity and non-repudiation of the transaction.

Enterprises no longer need to fear their brand and reputation are at risk in the event a legitimately authored PDF is maliciously modified and falsely re-circulated under their name.

**Modified/Changed**  
Potential Issue!

**Unknown Author**  
(Revoked, Expired or non trusted Digital ID)  
Potential Issue!

**Certified**  
Trusted

**Remember! For the highest assurances of who created a document, look for the Blue Security Bar and Blue Rosette.**

# DocumentSign™ - Who benefits from CDS

## Digital IDs for the Adobe PDF Platform: Certified Document Services (CDS)

### Healthcare:

The New England Journal of Medicine, 2004, reports “*paperwork represent 31% of all health care costs*”. CDS can help relieve the burden on physicians surrounding cumbersome processes involving patient paper-work while being part of a CFR 21 Part 11 compliant solution.

### Manufacturer and Design:

Architecture, Engineers, and Construction (AEC) professionals benefit from CDS with faster design collaboration, more efficient and less expensive electronic document storage, and stronger protection via tamper evident engineering and product documentation as documents are exchanged among customers, partners, contractors, and building departments.

### Education

More and more educational institutions are increasing student and alumni satisfaction as universities and colleges disseminate sensitive documents like transcripts and admissions letters electronically in a fraction of the time and costs seen with their paper equivalent.

### Government

CDS supports both local and federal government initiatives including the Government Paperwork elimination Act helping reduce costs, enhance citizen accessibility to government information, and reduce unnecessary environmental waste while at the same time providing high assurances to its citizens that the information is legitimate.

### Financial Services

Industry best practices coupled with government imposed regulation like Sarbanes-Oxley make CDS an attractive option as a thorough audit of the signature properties are embedded in the document itself. Well after the Digital ID expires, the signature characteristics are preserved providing relying parties strong authentication of both the organization and individual or role that signed the PDF, whether the content is still intact, and the exact date and time of the transaction as determined by a RFC 3161 compliant time-stamp.

### The Notarial and Legal professions

CDS provides unequalled support of trusted documents in multiple languages. This alone facilitates increased cross border transactions as both sides are able to interrogate the authenticity of a document in their local language; *the ideal solution for e-Notarization*.

### Other uses:

All sectors can benefit from publishing external facing marketing materials, supplier e-agreements, and internal high stakes documents that have been certified with DocumentSign Digital IDs. The Adobe CDS program protects the organization’s brand name from malicious alteration of company generated e-documents.

## Solution Highlights...

**PersonalSign™ Pro Digital ID** for Adobe PDF is a desktop solution designed for individuals and organizations with low volume requirements. Authors can certify PDFs using Adobe® Acrobat® or Adobe® LiveCycle® solutions and a GlobalSign DocumentSign™ Digital ID securely stored on a cryptographic device. For low volume requirements this is a SafeNet FIPS 140-1 level 2 USB token. *(highlighted below)*

**DepartmentSign Digital ID** for Adobe PDF is an automated PDF digital signing solution designed for organizations with medium volume requirements. A role-based credential e.g. ‘Marketing Department’ is issued and its corresponding private key securely protected on a SafeNet FIPS 140-1 level 2 cryptographic device such as a Luna® PCI HSM (Hardware Security Module)

**CorporateRA Digital ID** for Adobe includes two options for the Enterprise to manage the full life-cycle of Digital IDs issued under their organization name. i.e. Individual signing USB tokens or central-based credentials for either role-based signings or server held individual Digital IDs. Distributed implementations involve providing organization administrators (acting as the organization registration authority) a bulk shipment of Safenet USB tokens which work in conjunction with Acrobat Standard/Professional/3D. Centralized, server-based implementations work with SafeNet hardware security modules (optionally sold) that are highly integrated with Adobe’s LiveCycle Enterprise Server suite. The net result is a highly automated solution with robust signing functionality..

*SafeNET iKey™ 2032 USB Cryptographic security comes as standard for all PersonalSign and PersonalSign professional solutions – Portable/Flexible/Reliable*
